German quality standard and global sourcing

Newsletter August 2022: Solutions of bdp MC for logistics management

We are ISO 9001:2015 certified, many of our producers are also IATF 16949 certified.

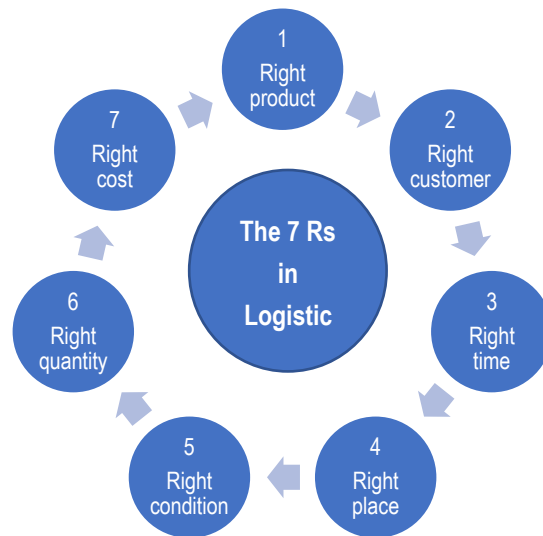

Logistics is an essential part of the supply chain and a key factor in successfully trading goods. We, bdp, are very aware of that, as we have been in the trading market since our foundation 30 years ago. We provide our customers the services they require at any moment, and for that, it is very important that we constantly evolve and adapt to the changing global logistics demands.

We can usually recommend our customers several options when it comes to delivering goods, mainly depending on the country where they will place their production. You can choose the incoterm that best suits your business. The most demanded incoterm, in international overseas production, is DDP (DELIVERY DUTY PAID). With this variant, bdp takes responsibility for all the risks and costs connected with the delivery of the goods, from the supplier right up to the customer. The procedure will be the following:

- Placing the order to the right supplier
- Arranging a well-defined production / delivery planning. One crucial part of logistics is to keep the customer informed at any time of the situation of their products
- Collection of the goods from supplier to the designated port
- Managing documentation at the origin port
- Monitoring of the goods on their way to Europe
- Management of documentation at arrival: we take care of all processes at arrival, including customs processes for you.
- Arranging transport delivery to the customer's facilities.
- Finally, getting confirmation that the goods arrive on time and in perfect condition.

We do not only offer our customers overseas manufacturing, but also European production. In this sense, we also provide the production-logistics services adapted to this demand. For example, starting with the production of complete trucks up to LTL (less than truckload) from our production sites in Poland, Bulgaria, and Turkey.

One of the main points in Logistics are the 7 Rs. At bdp, we aim to meet each and every one of these objectives so that we can meet and exceed our customers' expectations:

From a global supply chain perspective, we live in a time of uncertainty. We can still feel the impact of various factors that changed previously known business forms not so long ago. Therefore, it is more important than ever to have a trustworthy partner. With logistics, it is essential to stay updated on developments and trends. Thanks to our international positioning, bdp can monitor the supply chain from the beginning to the end, making us the right partner for you.

Another consequence of the developments of the last few years is the enormously increased freight cost. Due to our long experience in logistics, bdp can support you in reducing the impact of this high cost as much as possible.

Please feel free to contact us at any time. We will be happy to provide you with the service that best suits your company.

Carmen Navarro

Back office sales, bdp Mechanical Components Espana bdp, S.L.

Mrs. Navarro was born and raised in Spain. She studied in Granada and has a degree in English Philology. She started working at bdp MC already in 2001. Her responsibilities include logistics and administrative work as well as customer contact.

About bdp Mechanical Components

Founded in 1982, today's bdp Mechanical Components is headquartered in Berlin and has 14 other offices in Germany, China, Poland, Spain, Bulgaria, and Switzerland. bdp Mechanical Components is a specialized provider in the field of international sourcing of castings and forgings for customers who do not have a detailed overview of the most suitable suppliers for their products, especially in Asia (China), Turkey and Eastern Europe. And of course, also for customers who cannot accompany corresponding project start-ups closely on site with the suppliers and monitor the ongoing production.
